1. The plant is designated *Secretne Zavod*, [REDACTED]. The central section of Korpus J (11) originally had four stories and a flat roof. The fourth floor was later replaced by a cupola but this cupola was removed and the third story given a flat roof. The ventilation plant (20) was also torn down in the fall of 1949. The eastern side of area A was originally set apart by a fence, part of which was later removed. **
2. The installation presumably is a research plant. It was unusually quiet and no noise was heard during the nights. Only some of the windows were illuminated. All of the people seen in the area were dressed like clerks instead of like workers.
3. [REDACTED] atomic or related research work is being done at the installation. When he arrived in August 1948, a fellow P. who had been there for a long time said: "Do you see the fountains there? The Soviets say that they are operated by atomic power". Similar allusions to atomic energy were also made by Soviet workers.
4. Lead, special electric equipment, graphite, containers, missiles, or aircraft parts were not seen. ***

* **Comment.** Source of this report belonged to the same P. detail as those of a previous report on the Serebrany Bor Test Station.

** [REDACTED] 25X1A [REDACTED] 25X1A was used as a basic document. On it were entered the deviating statements of source of the present report. For sketch, see Annex. Apart from minor items the sketch agrees with the previous one. The fountains mentioned are in item 16 of Annex.

Comment. It seems to be impossible to obtain further information on the activities at this installation since the interior of the buildings was off-limits to all PWs.
